Name of Software: Wi-Finder

Description:

Taglined: Waze for wifi, Wi-Finder is a crowdsourced, web based app which allows it's users to connect to the best possible wifi. Users input their location, and the software outputs a list of possible wifi to connect to. Each result has a corresponding rating, and distance from the user's location. Should any user look deeper into the wifi result, they will be able to see any comments and ratings previous users have given the wifi connection. They are also given the option to rate and give their own comments on the specific wifi, giving their own insight to future users.

Main Features:

- Outputs Wifi in a 500 meter radius.
- Allows users to select individual wifi from the generated list, and see any associated comments and ratings.
- Allows users to rate and comment on any wifi result.
